

Significant Changes in AIDS Incidence Rates 2006-2008 and 2010-2012

This map illustrates the results of significance testing on AIDS incidence rates between 2006-2008 and 2010-2012. Of Florida's 67 counties, at a confidence level of 95%, 32 counties were significantly lower, one county was significantly higher, and 34 counties showed no significant difference. More conservative statistical techniques were utilized for counties with small population counts.
